BLENDED LEARNING

Blended Learning

- An educational approach that combines online educational opportunities and materials with face-to-face classroom materials

Blended Learning and COVID-19

- We were forced to adapt to the new normal
- Learn new ways of delivering content and connecting with learners
- We always need to be prepared informed on how to get things done both online and onsite

ADVANTAGES OF BLENDED LEARNING

- Blended learning methods can result in high levels of student achievement

- It is less expensive to deliver

- It allows flexibility, as it allows students to access the materials from anywhere, anytime and enjoy face to face support and instruction

- Students can track their progress

- Effective communication between students and their instructors

DISADVANTAGES OF BLENDED LEARNING

Lack of motivation can make blended learning very difficult, especially when teachers are less sensitive to their learner's cognitive needs

Initially it is a lot difficult for learners to learn basic technology skills on how to take online lessons and complete online assignments

Plagiarism and credibility problems as learners find it to resist the temptation of looking up for answers on the web

Teachers get overworked with having to find a balance between managing both online and physical classrooms.

GLOBAL TEACHERS INSTITUTE

HOW TO USE MICROSOFT TEAMS

- HOW TO CREATE A TEAM

- HOW TO SHARE THE SCREEN WITH LEARNERS

- HOW TO UPLOAD ASSIGNMNENTS AND MATERIALS ON FILES

- ONLINE MARKING AND GRADING
